

How do I get started?

- Identify the problem
- Define key terms
- Provide the background that why the problem exist
- Start from the background of problem
- What th field be like if the problem did not exist
- What would society look like with your problem and without your problem?
- Explain your idea and then a bit latter provide an evidence for that
- Link between the problem and research

The energy that we use in our lives comes from foods and things that we eat. Besides energies and some vitamins that food gives us, they are also necessary vitamins to get during our day or month.

Thus, in order to keep bacteria and germs out of our bodies and to support healthy growth, we require a wide variety of meals and vitamins. We are currently facing new challenges in our efforts to provide food for everyone on the planet.

Several issues, such as conflicts: For instance, the conflict between Russia and Ukraine raises grain prices, which has an impact on bread and other grain-related products. Another problem is climate change. In the past, we had better food because of favorable weather and less pollution, but today's food costs more to keep the same quality as it did in the past.

However, you could see how many children are starving to death and how many adults suffer from obesity if you just went to a journal like The Guardian. Inequalities are so significant that some people are dying as a result of them, while others struggle with having too much of them. In this discussion, we'll discuss the relationship between food costs and community wellness and additionally how much these factors affect society.
